I am very much passionate about information technology. I am a hardworking person who values those around me. I can work in a fast-paced environment and on my own, and I have excellent time management skills. I learn quickly and enjoy learning.

EXPERIRNCE

PERSONAL PROJECTS

smartBrain: Built with React, uses library Tachyons for styling and particlesJS for the animated background and of course the Fetch API from Clarifai which uses AI to detect faces.

robofriends: Built with React, uses library Tachyons for styling and RoboHash to generate the robots.

Budgets: Built with React and React-Bootstrap. It uses the local storage to store data, so, even after refreshing the page your data is still there.

forkify: A modern application made with the forkify API. It also uses the local storage to store data.

mapty: A modern application made with the Geoloacation API. It also uses the local storage to store data.

BANKIST: A marketing website for a fictional bank made with HTML, CSS and JavaScript.
